More about this rating

The rating is based on price volatility over the last five years, and is an indicator of absolute risk. Historical data may not be a reliable indication for the future. The value of an investment, and any income from it, may fall as well as rise, and you may not get back the amount you originally invested. The rating is not guaranteed to remain unchanged and the categorisation may shift over time. The lowest rating does not mean a risk-free investment.

Why is this fund in category 7?

Emerging markets are at an early stage of development and typically experience higher levels of return fluctuation than well-established economies. Political and economic challenges may temporarily result in illiquid markets and higher volatility in prices and currencies.

Risks materially relevant not adequately captured by the SRRI

- ▶ **Exchange rate risk** Investing in assets denominated in a currency other than that of the investor's own currency perspective exposes the value of the investment to exchange rate fluctuations.
- ▶ **Emerging market risk** Emerging economies typically exhibit higher levels of investment risk. Markets are not always well regulated or efficient and investments can be affected by reduced liquidity.
- ▶ **Operational risk** The main risks are related to systems and process failures. Investment processes are overseen by independent risk functions which are subject to independent audit and supervised by regulators.
- ▶ **Focused strategy risk** Funds with a narrow or concentrated investment strategy may experience higher risk and return fluctuations and lower liquidity than funds with a broader portfolio.
